

HTML and CSS ASSignment Guidelines

▼ Assignment

Objective

Build this page using raw HTML and CSS to accurately match the provided design, with a focus on semantic structure, visual fidelity, and full responsiveness.

Scope

- No Frameworks, Only HTML and CSS.
- Recreate layout, typography, spacing, colors, and interactive states using CSS only.
- Implement responsive behavior for mobile, tablet, and desktop breakpoints.

Requirements

- Use semantic HTML5 tags: `<header>`, `<nav>`, `<main>`, `<section>`, `<article>`, `<aside>`, `<footer>` where appropriate.
- External stylesheet only. No inline styles.
- Use Flexbox and/or Grid for layout. Avoid floats.
- Accessible markup: proper heading hierarchy, alt text for images, focus-visible states.
- Organize CSS: comments and sections, BEM-style class naming is preferred.
- Optimize assets and keep HTML/CSS clean and readable.

Deliverables

- Source files: `index.html`, `styles.css`, and assets folder.

- A short README with:
 - Overview of structure and approach
 - Breakpoints used
 - Any assumptions or limitations

Responsiveness Criteria

- Layout adapts cleanly at common widths, e.g. ~375px, ~768px, ~1024px, and larger.
- No horizontal scrollbars on supported breakpoints.
- Images and typography scale appropriately.

Evaluation Checklist

- Pixel fidelity to design
- Semantic HTML structure and accessibility
- CSS organization and naming
- Responsiveness and cross-browser behavior
- Code clarity and comments

Submission

- Share a Git repo link plus a live preview link (GitHub Pages).
